# SURVIVAL OF THE FITTEST EVOLUTION

The **Rhino-Rack BackBone** is the next level of evolution for your Jeep Wrangler JK. This simple design improves on the existing strength of your Jeep without compromising the bold look of this iconic vehicle.

**Your Wrangler JK has taken you everywhere you want to go; unfortunately you haven't been able to take all the things you need along with you. Until now...**

You can now carry up to 120kgs on your roof with the Rhino-Rack BackBone System. Simple and strong, this is evolution at it's best. It's time for your Wrangler to adapt to your lifestyle. Give your adventure a BackBone with Rhino-Rack BackBone.

**Evolution is simple. It's a small change over time to adapt to the needs of the species. That's what the Rhino-Rack BackBone is all about - the Evolution of your ride.**

The Rhino-Rack BackBone is fitted to the internal chassis of your Jeep. This design will not hinder any of the current capabilities of your Wrangler's design. The BackBone allows the weight of any of your goods to be transported on the roof by distributing the weight of your luggage evenly through the body of your Wrangler. It's ingeniously simple. The Rhino-Rack BackBone simply re-enforces an already strong design, and enables you to carry up to 120kgs on your Wrangler roof.

#### **HERE ARE THE PIECES.**

The BackBone is one concept that comes in two systems and a variety of combinations to suit your needs and preferences.

The Rhino-Rack BackBone is made of cast Aluminum point mount pads, connected via discrete internal steel frames to the interior body of your Wrangler. Any parts of the system that

are external are powder coated to suit the appearance of your Jeep. The BackBone is then fitted with Rhino-Rack Track Mount Leg Set and the Rhino-Rack Roof Rack Crossbars or Pioneer Platform.

#### **CROSSBARS**

Rhino-Rack Crossbars come in a range of styles and colours to suit. The Rhino-Rack BackBone is compatible with the Vortex and Heavy Duty Crossbars. Choose the Rhino-Rack Roof Racks that suit your needs and your taste.

#### **LEG KIT**

The Rhino-Rack BackBone is designed to accept the Rhino-Rack Leg Set, which can be fitted with Rhino-Rack Crossbars or Pioneer Platform or Tradie.

## **STRENGTH: SURVIVAL OF THE FITTEST**

Tested and proven. The Rhino-Rack BackBone has been tested to International Standards ISO PAS 11154-2006 Road Roof Load Carriers and Australian Standards AS1235-2000 Road Vehicle Roof Bar Testing. This is a product you can depend on from a company that you know and trust. With more than 22 years in the

industry, Rhino-Rack has been TRIED, TESTED and OFF ROAD PROVEN. Our name, like our products is synonymous with strength and the survival of the fittest.

**NOW OVER TO YOU TO  
START PLANNING YOUR  
NEXT ADVENTURE!**

## **TOUGH LOOKS WE KNOW BETTER THAN TO MESS WITH THE IMAGE OF YOUR JEEP.**

The Rhino-Rack BackBone is designed to increase the load carrying capability of your Jeep and not its image. There is no external cage. The BackBone is made of Cast Alloy and styled to compliment your Jeep's design. You can

**“LET RHINO-RACK  
REVOLUTIONIZE  
YOUR RIDE.”**

There is no need to remove panels or the entire roof of your Jeep Wrangler without dismantling the Rhino-Rack BackBone. The BackBone lends its strength to the Wrangler's design without changing its functionality or iconic image.
